Xho I; Filatial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black flies in
Cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in
culture. L3 of 0, volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3), 2000 larvae from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using
reverse transcriptase and oligo(dT) followed by RNase H
and DNA pol I: The library was constructed in the lambda
Uni-Zap XR vector and has 1 x 1086 independent
recombinants and the average insert size is -1200 bp. The

/organism="Strongyloides stercoralis"
/strain="Rhabditiform larvae obtained from gerbils"
/db.rafe="texaon:6248"
/clone_lib="TBN95TM-SSR"
/db_host="XL-1 Blue MRF" (Stratagene)"
/note="Wector: Lambda Uni-2AP XR (Stratagene); Site_l:
ECORI: Site_2: xhoi; mRNA was purified from 2 x 10E3
rhabditiform larvae which had been isolated from gerbils
experimentally infected with larvae originally isolated
from experimentally infected dogs. cDNA was constructed
and, using adaptors, was cloned unidirectionally into the
vector from the EcoRI site to the Xhoi site. The library
has an unamplified titer of 1 x 10E5 pfuvml and an
amplified, undiluted titer of 9 x 10E11 pfu/ml. The
average insert size of the unamplified library is 675 bp
(range, 100-1700)."

Tissue Procurement: Lothar Hennighausen Ph.D., Robin Humphreys

CDNA Library Preparation: Life Technologies, Inc.

CDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)

DNA Sequencing by: Incyte Genomics, Inc.

Clone distribution: MGC clone distribution information can be
found through the I.M.A.G.E. Consortium/LLNL at:

http://image.llnl.gov.h column: 19

High quality sequence start: 9

High quality sequence start: 9

High quality sequence stop: 604.

                                                                                                                                                         The invention comprises the amino acid and coding sequences of six human genset metabolic genes (GMG-7A, GMG-7B, GMG-8, GMG-9, GMG-10 and GMG-11). The GMG DNA and protein sequences of the invention are useful for treating or preventing metabolic-related disorders, such as: obesity; impaired glucose tolerance; insulin resistance; Syndrome X; Type II diabetes; hyperlipidaemia; atherosclerosis; hypertension; and heart diseases (e.g. cardac insulficiency, coronary insufficiency or high blood pressure). The GMG DNA and protein sequences of the invention may also be used as insulin sensitisers for improving insulin sensitivity in persons with non-insulin dependent diabetes mellitus. The present CDNA

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a genes (I) in a test sample condition genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia) or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving drugs or therapeutics for ischaemic diseases. AB199913 and AB199914 represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 CTGGACCTCCAGCACACCCCAGGCCCCCAGAAGAAGTGGGGCCTCCTGGTGCACCAGGTT 61

                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                        The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the protein may be used in the diagnosis. Composition and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the partication of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probess or primers for nucleic acid hybridisation assays. ABK44061-ABK4209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polynucleotide encoding pancreatic tumour polypeptides, useful in pharmaceutical compositions, e.g. vaccines, for treating pancreatic

                                                                                                                                                                                                   qq
                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the protein may be used in the diagnosis. C prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the cevelopment of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probess or primers for nucleic acid hybridisation assays. ABK44061-ABK44209

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of cDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosis, prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotide encoding pancreatic tumour polypeptides, useful in pharmaceutical compositions, e.g. vaccines, for treating pancreatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        or primers for nucleic acid hybridisation assays. ABK44061-ABK44209 represent cDNA sequences encoding for human pancreatic tumour proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  development of cancer in a patient, or as markers for the progression
of cancer. The polynucleotide sequences may also be used as probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; pancreatic tumour protein; immune response; pancreatic cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of cDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the protein may be used in the diagnosis, or natibody that binds to the protein may be used in the diagnosis, or prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaccutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the cevelopment of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probess or primers for nucleic acid hybridisation assays. ABK44061-ABK4209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ŗ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           represent cDNA sequences encoding for human pancreatic tumour proteins.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosis, prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the protein may be used in the diagnosis. C prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the compositions cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probes or primers for nucleic acid hybridisation assays. ABK44061-ABK44009

The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the presence of cancer in a patient. A composition comprising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosis. Prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the cancer of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probes or primers for nucleic acid hybridisation assays. ABK44061_ABK4209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel polynucleotide encoding pancreatic tumour polypeptides, useful in pharmaceutical compositions, e.g. vaccines, for treating pancreatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    represent cDNA sequences encoding for human pancreatic tumour proteins

The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the protein may be used in the diagnosis, or prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the compositions of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probes or primers for nucleic acid hybridisation assays. ABK44061-ABK44209.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of CDNA sequences encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosis, prevention and/or treatment of diseases, particularly pancreatic. Cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the development of cancer in a patient, or as markers for the progression of the concerned of the concerned of the progression and treatment of cancer in a patient, or as markers for the progression of the concerned of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel polynucleotide encoding pancreatic tumour polypeptides, useful in pharmaceutical compositions, e.g. vaccines, for treating pancreatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      represent cDNA sequences encoding for human pancreatic tumour proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                             encoding human pancreatic tumour proteins. The polynucleotide sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for sequences encoding human pancreatic tumour proteins are useful for cancer in a patient that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the prolynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosis. Prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the converted of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probess or primers for nucleic acid hybridisation assays. ABK44061-ABK44209

COMMENT  CBLO 15A, UK. E-mail enquiries: hunquery Bsanger.ac.uk Clone  CBLO 15A, UK. E-mail enquiries: hunquery Bsanger.ac.uk Clone  CBLO 15A, UK. E-mail enquiries: hunquery Bsanger.ac.uk Clone  requests: clonerquest Gespanger.ac.uk  On Dec 13, 1999 this sequence version replaced gi:3164067.  During sequence assembly data is compared from overlapping clones.  Where differences are found these are annotated as variations stored that the note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, we submit sequences with corresponding to the overlapping clone, as submit sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Meret the aspectance is ambiguous, there is an annotation using the 'unsure' feature key.  The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:  Em: EMBL: Sw., SWISSEROT; TT: TERMEL, Mp: WORMPEP information on the WORMPEP database can be found at the primary accession checking from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22, constructed by the Sanger Centre Chromosome 22, constructed by the group of Pieter de Jong. For further detabls see http://www.sanger.ac.uk/PIG/CDL2 as Found at the Roswell RP1-302D9 is from the library RPCI-1 constructed at the Roswell RP2-302D9 is from the library RPCI-1 constructed at the Roswell RP2-302D9 is from the library RPCI-1 in the library RPCI-1 clone RP1-302D9 The true left end of clone CTA-28PF2 is at 65682 in this sequence. ```
Current sequence finishing criteria for the C. elegans genome sequenced finishing criteria for the C. elegans genome sequenced consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.

IMPORTANT: This sequence is not the entire insert of clone F57B1. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone F57B1 is at 1 in this sequence. The true right end of clone F57B1 is at 1 in this sequence. The true right end of clone F57B1 is at 2573 in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QTISNIRAEFSAHDKQLDFKTDHLEKILLENVIEHSKWKESAIEELKQIKLMOAEISD

It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is the entire insert of clone Y51H4A. The true left end of clone Y43D4A is at 193825 in this sequence. The start of this sequence (1.115) overlaps with the end of sequence AL713992.

The end of this sequence (269514. .269619) overlaps with the start of sequence AL132846.

Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other
                                                                                                                                                                                                                                                                                                                                    Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note.
